

Software updates: updating your EXE

When ETS makes any software changes, a new exe (MMETS.exe) is required and is made available to you via our pick-up site.

You will receive an email from ETS that it's waiting for you on the pickup site and is ready for download.

Before proceeding, make sure you are logged out of the software.

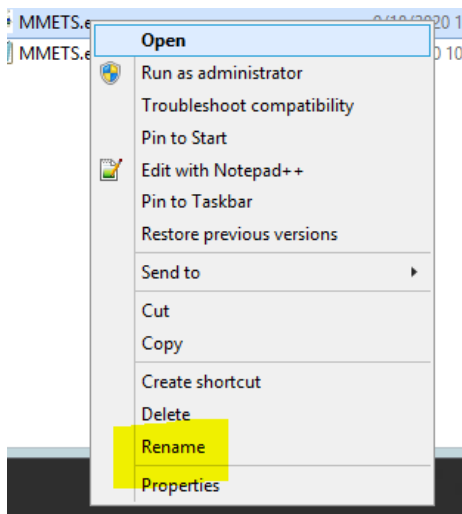

The exe will be in zipped format. You will need to unzip or extract the file, copy it and paste it into the Program Folder(x86)-Economised Time Services folder.

If you get a message stating that it can't copy over, it is because you cannot copy the file in with the same name as the existing one. It thinks the program is already open. See example below.

In this case, you will need to rename the old exe by right clicking on the file and selecting 'Rename'. You can name it **MMETS-OLD**.

Once you have renamed the original exe, copy the new file into the folder listed below:

c:\program files (x86)\Economised Time Services

Local Disk (C:) > Program Files (x86) > Economised Time Services
